Assessor's comment

1. Sound clinical assessment & good skills overall
2. Documentation of initial assessment & management plan should cover all key issues, i.e. chest pain, oedema/ccf & important negatives e.g. diabetes
3. Results must be documented & commented on
4. Advise get into the habit of final dot point summary of issues & MX at discharge - puts your thoughts out there & good learning strategy to check against more experienced practitioner
